*bayernets* GmbH  
Poccistraße 7  
80336 München  
Germany

2020 - 06 - 09

### Preliminary remark

On 22.08.2019, a non-binding capacity request was made by AGGM Austrian Gas Grid Management AG for the cross-border connection point Kiefersfelden/Pfronten in accordance with Section 26 CAM NC amounting to 250 MWh/h for the gas years 2020/21 up to and including 2035/36. The capacity in question is a notification for freely allocable firm capacities in addition to the already existing capacity at the cross-border connection point Kiefersfelden/Pfronten.

Within the framework of the market analysis carried out, an increased demand for capacity was determined and, accordingly, a procedure with regard to creating additional capacity at the Trading Hub Europe – Austria (Tyrol) border was initiated by *bayernets* and OGE.

On completion of the market analysis, the planning phase was begun. The modelling carried out by *bayernets* together with OGE was based on an updated data base and grid calculations of mechanical gas flows for the relevant grid area and showed that AGGM's announced capacity requirement for the cross-border connection point Kiefersfelden/Pfronten can be met without additional network development.

### Possibility to book capacity on Prisma from 6 July 2020

In the annual auction on the Prisma capacity platform on the 6 July 2020 (first publication 6 June 2020), the requested capacity at the cross-border connection point Kiefersfelden/Pfronten will be offered to the market by the grid operator *bayernets*.

## Conclusion of the Procedure

From the point of view of the network operators *bayernets* and OGE the Incremental Capacity Process at the Trading Hub Europe – Austria (Tyrol) border is therefore completed.
